

## Kerb

### *Strengths:*

Very similar in scope to Parkit  
Additional range of vehicles - helicopters etc  
International and widely used  
Attractive informational website

### *Weaknesses:*

Takes 20% of fees which may be excessive  
Does not allow trucks or buses even if space is available  
No storage space (possible niche for Parkit)  
No hourly rates - flat daily rate is the minimum

## Parkhound

### *Strengths:*

Focuses on long term parking - weeks to months (but also offers hourly, daily, weekly)  
Negotiation and haggling process between parker and space owner allows for greater control  
Can arrange inspection of park beforehand through the app

### *Weaknesses:*

Takes 4-12 hours for booking to be approved, making it irrelevant for unplanned journeys  
Parker must pay a bond (for key return and such), might make new users hesitant  
Website layout does not clearly specify the prices for hourly/daily/weekly prices  
Somewhat unprofessional website content.

**I'm not happy with the parking space I booked. Can I get a refund?**

Please refer to our [Cancellation Policy](#) written by our extremely expensive lawyers \*don't tell them we said that\*.

## Park Me & Cheap Parking

Comparison style parking database app

### *Strengths:*

Allows user to visualise different parking areas in a given area  
Displays pricing information, notes, photos etc.  
No payments handled through the app make users less hesitant

#### Weaknesses:

Only allows for booking in rare cases  
Still requires use of third party websites (such as official carpark booking apps)  
Relies on advertisement as a monetization scheme
