

How to Access High Fidelity Mock-ups

Link to project: <https://projects.invisionapp.com/share/Y4E3RLLFB>

To access the high-fidelity mock-ups, the user must have access to the internet and be familiar with the InVision tool.

How to Use:

InVision allows the user to navigate through the application like it is a real life tool. You are allowed to click the buttons like any normal application.

We want users to be mindful that this is merely a mock-up tool that does not have full functionality of a normal application. The data that is used within InVision is mock data and not real. Additionally, through the demonstration of the high-fidelity mock-up some of the buttons may not work.
